

Boston's Central Artery Surface Restoration

Boston, MA

Agresoil Compost™ made in Merrimack, NH, has been chosen for use as a soil amendment on one of the first of many upcoming landscape projects as part of Boston's central artery surface restoration. The compost met stringent specification requirements established by Central Artery landscape architects and engineers. The compost was chosen mainly for its quality and consistency.

Agresoil Compost™ adds vital organic matter, beneficial microbes, and nutrients to soil. Soils made using Agresoil Compost™ will be used in a variety of applications, including turfgrass establishment, tree and shrub planting, and flower beds.
